

DFA - DroneFlightAnalysis

Important hints to Microsoft Vista

To use all functions after installing you have to start setup and the application DFA as administrator.

If you have always installed DFA, then deinstall it.

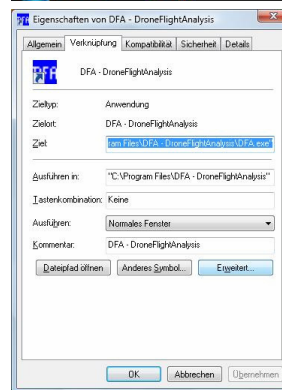

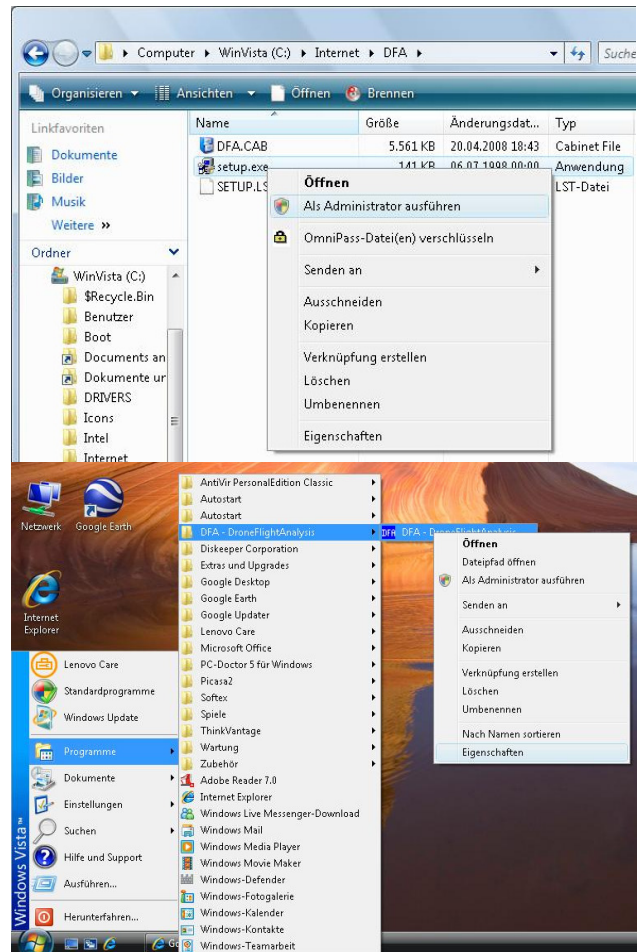

1. Start setup as administrator

- Right mouseclick to „Setup.exe“
- Menu „execute as administrator“

2. Execute program as administrator

After installing DFA Vista starts it with restricted rights. That limits the functionality. Configure the startsymbols, so that the program will be started as administrator (icon in startmenu, icon on desktop and icon in taskbar, if you have):

- Right mouseclick on startsymbol
- „Properties“
- „Advanced“

- Checkbox „Execute as administrator“
- „OK“
